

Bleeding and venting valves

Bleeding and venting valves EB 1.74

for start-up and continuous operation

Technical Data

Connection DN	50 - 150
Nominal pressure PN	16
Operating pressure	0.2 up to 8 bar
Flow rate	1783 Nm ³ /h
Temperature	130 °C
Medium	liquids

Description

Bleeding and venting valves remove air or gases from systems or pipelines without requiring an external energy input. When a system is drained they act as venting valves; venting may be prevented by fitting a non-return valve.

The EB 1.74 bleeding/venting valve is a combined start-up/continuous bleeding/venting valve with float control. It is manufactured from deep-drawn stainless steel featuring excellent corrosion resistance. The valve cone can be fitted with a soft or metallic seal.

Top and bottom sections of the valve body are connected by a clamp ring and two bolts. Servicing/maintenance is easy and does not call for special toolin

During start-up a large volume of air is bled at low pressure via a large valve cone. When the bleed valve is closed and small air volumes have to be bled during continuous operation, an additional smaller cone in the valve opens and bleeds these smaller volumes. The large cone will not open until the liquid level and the pressure drops. The valve opens immediately if a vacuum forms. **The minimum pressure required for valve sealing is 0.2 bar.**

Standard

- » All stainless steel construction
- » Quick-release body clamp ring

Options

- » Ozone-resistant design
- » Various seal materials suitable for your medium
- » Plastic coating for corrosive fluids
- » Non-return valve to prevent venting
- » Special connections: Aseptic, ANSI or JIS flanges, welding spigots; other connections on request
- » Special versions on request

Operating instructions, know how and safety instructions must be observed. The pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.
